

Delta chill water buffer tanks allow for optimum temperature control in closed-loop systems. These tanks act as water reservoirs to inhibit temperature changes and prevent excessive chiller cycling. The baffle which comes standard in the CWBT increases water mixing and also aids in the separation of air which can be released from the top vent.

ASME CODE SEC. VIII DIV. 1
NATIONAL BOARD REGISTERED
CARBON STEEL
PRIMER EXTERIOR
125 PSI DESIGN
(OTHER DESIGN PRESSURES AVAILABLE)
